Price: \$2.50

INTRODUCTION

Volume II of the Import Commodity Classification is designed primarily for the use of the staffs concerned with the accuracy of Canada's import statistics. It lists in numeric order the English descriptions of all import commodity classes as they appear in monthly and quarterly trade reports, and shows after each class description the "office rulings" on commodity descriptions not specifically mentioned in the commodity classes but frequently encountered on customs import documents. It therefore provides a useful guide to the probable main components of any import commodity class. Because it is a working document, its content is continually changing, and it is therefore printed in loose-leaf form to facilitate revisions to individual pages as required.

This volume makes no attempt to provide a complete list of the contents of each import commodity class. Such a list would be too unwieldy for daily use. Nor are the rulings it contains designed to be self-sufficient; each ruling must be read in the context of the full class description and notes contained in Volume I of the Import Commodity Classification (DBS Cat. No. 12-524). Finally, it is not designed to help users find the class in which particular commodities are included; that purpose is better served by Volume III of the Import Commodity Classification (DBS Cat. No. 12-526) which presents the same material arranged in alphabetic order.

All office rulings (including commodity class descriptions) are kept on punch cards to aid in making revisions and in controlling their accuracy and adequacy. This volume has been printed from copy prepared by listing these punch cards, which has imposed certain important limitations on the phrasing, punctuation and format which are used. The most important limitation is that of length: all class descriptions and most rulings are confined to one descriptive line not exceeding 35 characters in length (including all blank spaces, but not including the class code or unit of quantity). Because of this limitation there is extensive use of abbreviations, and this volume must be read carefully if users are to avoid being misled by these abbreviations. When the meaning of a ruling could not be expressed in one line even with abbreviations, a second line of not more than 31 characters was added. In these cases the second descriptive line is identified by a 4-letter indentation.

This volume is divided into two sections. The first section or "preamble" is brief (9 pages) and has two parts:

The first part contains items which provide:

- (a) general guides to the classification of broad categories of goods
(e.g.: BERYLLIUM COPPER IS A COPPER ALLOY.)
- (b) definitions of common abbreviations used in this volume
(e.g.: FAB IS AN ABBREVIATION FOR FABRICS.)
- (c) warnings against basing a commodity classification decision on a term known to apply to more than one class of commodity
(e.g.: IGEPON IS A GENERAL TRADE NAME)

These items do not show a commodity code, and are arranged in alphabetic order.

The second part contains also in alphabetic order those group descriptions which are included in Volume III, the Alphabetic Index, in order to assist in locating groups (or sub-groups) of commodities often thought of as collective units or important in the structure of the classification. They show the group code, and may contain a unit of quantity (where all classes in the group have the same unit), or a dash (where no classes take a quantity), or a blank in the quantity column (where there is no common standard within the group). Leader dots link the description and its unit of quantity.

The balance of this volume presents the import class descriptions and specific commodity rulings arranged in numeric order, and by alphabetic order within each class. The first item shown for any class is the class description, while additional items for any class are specific commodity rulings. These items have the following characteristics:

1. Class descriptions: these consist of one descriptive line of up to 35 characters, a unit of quantity (or a blank if the class does not record quantity), and a class code. They do not have leader dots, and are further identified by the symbol □ preceding the description. In some cases class descriptions are sufficiently specific to make rulings on these classes unnecessary, but in other cases rulings are required to indicate the main commodities falling within given classes.
2. Specific commodity rulings: these consist of a 35 character description, occasionally supplemented by a second descriptive line of up to 31 characters, a unit of quantity (or a dash if goods which would be governed by a specific ruling are recorded without a quantity), and a class code. Leader dots link the ruling and its unit of quantity. The specific commodity rulings account for the vast majority of items in this volume.

Note that some rulings to certain classes specify a unit of quantity, while other rulings to the same classes show a dash in the quantity column. This will occur whenever a class takes both complete units and parts of units; rulings on complete units will usually specify a quantity (commonly "number"), while "parts" rulings will show a dash because parts are recorded without quantities.

This volume makes extensive use of abbreviations because of the need to limit most descriptions to 35 characters. Some are standard dictionary abbreviations, some are terms widely used in industry, and some have been tailored to the specific needs of this volume by such devices as the omission of vowels or the omission of terminal syllables. There is no complete list of the abbreviations used, more than one abbreviation may be used for the same word or phrase, and one abbreviation sometimes has two different meanings. The following examples define some of the more common abbreviations and illustrate the lack of uniformity:

(1) To describe steel:

AS ... alloy steel	CD ... cold drawn
CS ... carbon steel	CF ... cold finished
SS ... stainless steel (where distinguished from other alloy steel)	CR ... cold rolled
	HR ... hot rolled

(2) To describe textile fibres, textiles and textile products:

BL)	... bleached	KNIT)	... knitted
BLEACHD)		KNTD)	
COT	... cotton	WOV	... woven
FAB	... fabrics		broad woven
		WOV NAR	... narrow woven

(3) Miscellaneous:

ELEC	... electric	MAT	... materials
	electrical	PLAST	... plastic
EXC	... except	PROD	... products
INCL	... including	PT)	... parts
IND	... industry	PTS)	
INDUST	... industrial	SYN	... synthetic
MACH	... machine(s)	T.I.	... tariff item
MACHY)			
MCHY)	... machinery		

Units of Quantity: In preparing the import commodity classification, a systematic effort was made to select units of quantity which could readily be reported, which could be made uniform in import and export statistics, and which would not conflict with units which must be shown on customs documents for tariff purposes. As far as possible uniform units of quantity are used in each group of the classification to facilitate mechanical methods of tabulation, and also for goods imported under any tariff item to facilitate reporting. Weight and number are the most commonly used units since one or both of these is normally available for any import shipment, but in some cases measures of volume, area or length are used to conform with prevailing industrial practice or the tariff. Generally, weight is the most common measure of quantity in Sections II, III and IV of the classification, number in Sections I and V.

Producers and processors of canned foods have recommended that quantity statistics for these commodities should be in terms of "net weight", i.e. that the weight of all containers, including the cans, should be omitted and only the weight of the contents of the cans shown. This classification attempts to follow that recommendation for canned meats, canned fish, canned dairy produce, canned pickles, canned maple products, canned instant coffee, canned soups and canned baby foods. It is not feasible to follow this practice for other canned foods, especially for canned fruits and vegetables, since the necessary information can not readily be extracted from customs documents.

Throughout the import commodity classification the term "canned" means preserved solely by being shut off from contact with air. It therefore includes all food preserved by hermetically sealed containers, whether these be made of metal, of glass or of other materials, and also food packed in plastic wrappings and preserved solely by sealing against penetration by air. It does not include frozen foods regardless of the use of hermetically sealed containers, since frozen foods are preserved primarily by being frozen rather than by being shut off from contact with air. Likewise foods wrapped and sealed in plastic materials but which must be kept under refrigeration are not included as "canned".

ABBREVIATIONS, DEFINITIONS AND UNITS OF QUANTITY USED IN CANADIAN IMPORT STATISTICS

Bbl.	Volume in barrels, for petroleum, 35 Canadian gallons or 42 U.S. gallons
Broad woven ...	More than 12 inches in width.
Bu.	Volume in bushels, for barley, 48 lb. for oats, 34 lb. for buckwheat, 48 lb. for rye, 56 lb. for Indian corn (maize), 56 lb. for wheat, 60 lb.
Canned	Preserved solely by being shut off from air.
Carat	Weight in carats.
Cord	Volume in cords.
Cwt.	Weight in hundredweights of 100 lb. each.
Cwt. N.	For canned foods, weight of contents of cans in hundredweights of 100 lb. each, the weight of all containers and packing being excluded.
Doz.	Number of dozens.
Doz. Pr.) Dz. Pr.)	Number of pairs in dozens.
Ft.	Length in linear feet.
Gal.	Volume in Canadian gallons (1 U.S. gal. = 0.83 Can. gal.).
Gross	Number in gross.
Hardwood	Wood from broad-leaved trees.
Kg.	Weight in kilograms (1 Kg. = 2.2 lb.).
Lb.	Weight in pounds.
Lb. N.	For canned foods, weight of contents of cans in pounds, the weight of all containers and packing being excluded.
M.	Number in thousands.
M. B. Ft.) M. B. F.)	Volume in thousand board feet.
M. Cu. Ft.) M. C. F.) ...	Volume in thousand cubic feet.
M. Kw. H.	Thousand kilowatt hours.

Narrow woven ...	Not more than 12 inches in width.
N. E. S.	Not elsewhere specified.
No.	Number.
Oz.	Weight in ounces.
Pack	Number of packs.
Pair	Number of pairs.
P. Gal.	Volume of alcoholic content in terms of Canadian gallons of the strength of proof (1 U.S. P.gal. = 0.74 Can. P.gal.).
Pkg.	Number of packages.
Softwood	Wood from coniferous trees.
Sq. Ft.	Area in square feet.
Sq. Ft. ½" equiv.)	Volume in square feet of ½" thickness, other thicknesses to be converted to the equivalent of ½" thickness (e.g. 10,000 sq.ft. of 1/8" plywood = 5,000 sq.ft. of ½" equivalent).
)	
SF1/4)	
Sq. Yd.	Area in square yards.
Ton	Weight in short tons of 2,000 lb. each: 1 long ton = 1.12 short tons or 2,240 lb. 1 metric ton = 1.1 short tons or 2,205 lb.
Tr. Oz.	Weight in troy ounces.
-	In Unit of Quantity Column: no quantity recorded.
*	Preceding ruling: ruling new or revised as of date appearing at top of page.
□	Precedes each class description card to distinguish class descriptions from rulings.

**IMPORT
COMMODITY CLASSIFICATION**

VOLUME II — NUMERIC INDEX

1969 EDITION

In Effect January 1, 1969

WORKING DOCUMENT

TO BE ISSUED ANNUALLY

Published by Authority of
The Minister of Trade and Commerce

INTRODUCTION

Volume II of the Import Commodity Classification is designed primarily for the use of the staffs concerned with the accuracy of Canada's import statistics. It lists in numeric order the English descriptions of all import commodity classes as they appear in monthly and quarterly trade reports, and shows after each class description the "office rulings" on commodity descriptions not specifically mentioned in the commodity classes but frequently encountered on customs import documents. It therefore provides a useful guide to the probable main components of any import commodity class. Because it is a working document, its content is continually changing, and it is therefore printed in loose-leaf form to facilitate revisions to individual pages as required.

This volume makes no attempt to provide a complete list of the contents of each import commodity class. Such a list would be too unwieldy for daily use. Nor are the rulings it contains designed to be self-sufficient; each ruling must be read in the context of the full class description and notes contained in Volume I of the Import Commodity Classification (DBS Cat. No. 12-524). Finally, it is not designed to help users find the class in which particular commodities are included; that purpose is better served by Volume III of the Import Commodity Classification (DBS Cat. No. 12-526) which presents the same material arranged in alphabetic order.

All office rulings (including commodity class descriptions) are kept on punch cards to aid in making revisions and in controlling their accuracy and adequacy. This volume has been printed from copy prepared by listing these punch cards, which has imposed certain important limitations on the phrasing, punctuation and format which are used. The most important limitation is that of length: all class descriptions and most rulings are confined to one descriptive line not exceeding 35 characters in length (including all blank spaces, but not including the class code or unit of quantity). Because of this limitation there is extensive use of abbreviations, and this volume must be read carefully if users are to avoid being misled by these abbreviations. When the meaning of a ruling could not be expressed in one line even with abbreviations, a second line of not more than 31 characters was added. In these cases the second descriptive line is identified by a 4-letter indentation.

This volume is divided into two sections. The first section or "preamble" is brief (9 pages) and has two parts:

The first part contains items which provide:

- (a) general guides to the classification of broad categories of goods
(e.g.: BERYLLIUM COPPER IS A COPPER ALLOY.)
- (b) definitions of common abbreviations used in this volume
(e.g.: FAB IS AN ABBREVIATION FOR FABRICS.)
- (c) warnings against basing a commodity classification decision on a term known to apply to more than one class of commodity
(e.g.: IGEPON IS A GENERAL TRADE NAME)

These items do not show a commodity code, and are arranged in alphabetic order.

The second part contains also in alphabetic order those group descriptions which are included in Volume III, the Alphabetic Index, in order to assist in locating groups (or sub-groups) of commodities often thought of as collective units or important in the structure of the classification. They show the group code, and may contain a unit of quantity (where all classes in the group have the same unit), or a dash (where no classes take a quantity), or a blank in the quantity column (where there is no common standard within the group). Leader dots link the description and its unit of quantity.

The balance of this volume presents the import class descriptions and specific commodity rulings arranged in numeric order, and by alphabetic order within each class. The first item shown for any class is the class description, while additional items for any class are specific commodity rulings. These items have the following characteristics:

1. Class descriptions: these consist of one descriptive line of up to 35 characters, a unit of quantity (or a blank if the class does not record quantity), and a class code. They do not have leader dots, and are further identified by the symbol □ preceding the description. In some cases class descriptions are sufficiently specific to make rulings on these classes unnecessary, but in other cases rulings are required to indicate the main commodities falling within given classes.
2. Specific commodity rulings: these consist of a 35 character description, occasionally supplemented by a second descriptive line of up to 31 characters, a unit of quantity (or a dash if goods which would be governed by a specific ruling are recorded without a quantity), and a class code. Leader dots link the ruling and its unit of quantity. The specific commodity rulings account for the vast majority of items in this volume.

Note that some rulings to certain classes specify a unit of quantity, while other rulings to the same classes show a dash in the quantity column. This will occur whenever a class takes both complete units and parts of units; rulings on complete units will usually specify a quantity (commonly "number"), while "parts" rulings will show a dash because parts are recorded without quantities.

This volume makes extensive use of abbreviations because of the need to limit most descriptions to 35 characters. Some are standard dictionary abbreviations, some are terms widely used in industry, and some have been tailored to the specific needs of this volume by such devices as the omission of vowels or the omission of terminal syllables. There is no complete list of the abbreviations used, more than one abbreviation may be used for the same word or phrase, and one abbreviation sometimes has two different meanings. The following examples define some of the more common abbreviations and illustrate the lack of uniformity:

(1) To describe steel:

AS ... alloy steel	CD ... cold drawn
CS ... carbon steel	CF ... cold finished
SS ... stainless steel (where distinguished from other alloy steel)	CR ... cold rolled
	HR ... hot rolled

(2) To describe textile fibres, textiles and textile products:

BL)	...	bleached	KNIT)	...	knitted
BLEACHD)	...		KNTD)	...	
COT	...	cotton	WOV	...	woven
FAB	...	fabrics			broad woven
			WOV NAR	...	narrow woven

(3) Miscellaneous:

ELEC	...	electric	MAT	...	materials
		electrical	PLAST	...	plastic
EXC	...	except	PROD	...	products
INCL	...	including	PT)	...	parts
IND	...	industry	PTS)	...	
INDUST	...	industrial	SYN	...	synthetic
MACH	...	machine(s)	T.I.	...	tariff item
MACHY)	...				
MCHY)	...	machinery			

Units of Quantity: In preparing the import commodity classification, a systematic effort was made to select units of quantity which could readily be reported, which could be made uniform in import and export statistics, and which would not conflict with units which must be shown on customs documents for tariff purposes. As far as possible uniform units of quantity are used in each group of the classification to facilitate mechanical methods of tabulation, and also for goods imported under any tariff item to facilitate reporting. Weight and number are the most commonly used units since one or both of these is normally available for any import shipment, but in some cases measures of volume, area or length are used to conform with prevailing industrial practice or the tariff. Generally, weight is the most common measure of quantity in Sections II, III and IV of the classification, number in Sections I and V.

Producers and processors of canned foods have recommended that quantity statistics for these commodities should be in terms of "net weight", i.e. that the weight of all containers, including the cans, should be omitted and only the weight of the contents of the cans shown. This classification attempts to follow that recommendation for canned meats, canned fish, canned dairy produce, canned pickles, canned maple products, canned instant coffee, canned soups and canned baby foods. It is not feasible to follow this practice for other canned foods, especially for canned fruits and vegetables, since the necessary information can not readily be extracted from customs documents.

Throughout the import commodity classification the term "canned" means preserved solely by being shut off from contact with air. It therefore includes all food preserved by hermetically sealed containers, whether these be made of metal, of glass or of other materials, and also food packed in plastic wrappings and preserved solely by sealing against penetration by air. It does not include frozen foods regardless of the use of hermetically sealed containers, since frozen foods are preserved primarily by being frozen rather than by being shut off from contact with air. Likewise foods wrapped and sealed in plastic materials but which must be kept under refrigeration are not included as "canned".

ABBREVIATIONS, DEFINITIONS AND UNITS OF QUANTITY USED IN CANADIAN IMPORT STATISTICS

Bbl.	Volume in barrels, for petroleum, 35 Canadian gallons or 42 U.S. gallons
Broad woven ...	More than 12 inches in width.
Bu.	Volume in bushels, for barley, 48 lb. for oats, 34 lb. for buckwheat, 48 lb. for rye, 56 lb. for Indian corn (maize), 56 lb. for wheat, 60 lb.
Canned	Preserved solely by being shut off from air.
Carat	Weight in carats.
Cord	Volume in cords.
Cwt.	Weight in hundredweights of 100 lb. each.
Cwt. N.	For canned foods, weight of contents of cans in hundredweights of 100 lb. each, the weight of all containers and packing being excluded.
Doz.	Number of dozens.
Doz. Pr.) Dz. Pr.)	Number of pairs in dozens.
Ft.	Length in linear feet.
Gal.	Volume in Canadian gallons (1 U.S. gal. = 0.83 Can. gal.).
Gross	Number in gross.
Hardwood	Wood from broad-leaved trees.
Kg.	Weight in kilograms (1 Kg. = 2.2 lb.).
Lb.	Weight in pounds.
Lb. N.	For canned foods, weight of contents of cans in pounds, the weight of all containers and packing being excluded.
M.	Number in thousands.
M. B. Ft.) M. B. F.)	Volume in thousand board feet.
M. Cu. Ft.) M. C. F.) ...	Volume in thousand cubic feet.
M. Kw. H.	Thousand kilowatt hours.

Narrow woven ...	Not more than 12 inches in width.
N. E. S.	Not elsewhere specified.
No.	Number.
Oz.	Weight in ounces.
Pack	Number of packs.
Pair	Number of pairs.
P. Gal.	Volume of alcoholic content in terms of Canadian gallons of the strength of proof (1 U.S. P.gal. = 0.74 Can. P.gal.).
Pkg.	Number of packages.
Softwood	Wood from coniferous trees.
Sq. Ft.	Area in square feet.
Sq. Ft. ¼" equiv.)) SF1/4)	Volume in square feet of ¼" thickness, other thicknesses to be converted to the equivalent of ¼" thickness (e.g. 10,000 sq.ft. of 1/8" plywood = 5,000 sq.ft. of ¼" equivalent).
Sq. Yd.	Area in square yards.
Ton	Weight in short tons of 2,000 lb. each: 1 long ton = 1.12 short tons or 2,240 lb. 1 metric ton = 1.1 short tons or 2,205 lb.
Tr. Oz.	Weight in troy ounces.
-	In Unit of Quantity Column: no quantity recorded.
*	Preceding ruling: ruling new or revised as of date appearing at top of page.
□	Precedes each class description card to distinguish class descriptions from rulings.

IMPORT
COMMODITY CLASSIFICATION
VOLUME II — NUMERIC INDEX

In Effect January 1, 1970

WORKING DOCUMENT
TO BE ISSUED ANNUALLY

Published by Authority of
The Minister of Industry, Trade and Commerce

INTRODUCTION

Volume II of the Import Commodity Classification is designed primarily for the use of the staffs concerned with the accuracy of Canada's import statistics. It lists in numeric order the English descriptions of all import commodity classes as they appear in monthly and quarterly trade reports, and shows after each class description the "office rulings" on commodity descriptions not specifically mentioned in the commodity classes but frequently encountered on customs import documents. It therefore provides a useful guide to the probable main components of any import commodity class. Because it is a working document, its content is continually changing, and it is therefore printed in loose-leaf form to facilitate revisions to individual pages as required.

This volume makes no attempt to provide a complete list of the contents of each import commodity class. Such a list would be too unwieldy for daily use. Nor are the rulings it contains designed to be self-sufficient; each ruling must be read in the context of the full class description and notes contained in Volume I of the Import Commodity Classification (DBS Cat. No. 12-524). Finally, it is not designed to help users find the class in which particular commodities are included; that purpose is better served by Volume III of the Import Commodity Classification (DBS Cat. No. 12-526) which presents the same material arranged in alphabetic order.

All office rulings (including commodity class descriptions) are kept on punch cards to aid in making revisions and in controlling their accuracy and adequacy. This volume has been printed from copy prepared by listing these punch cards, which has imposed certain important limitations on the phrasing, punctuation and format which are used. The most important limitation is that of length: all class descriptions and most rulings are confined to one descriptive line not exceeding 35 characters in length (including all blank spaces, but not including the class code or unit of quantity). Because of this limitation there is extensive use of abbreviations, and this volume must be read carefully if users are to avoid being misled by these abbreviations. When the meaning of a ruling could not be expressed in one line even with abbreviations, a second line of not more than 31 characters was added. In these cases the second descriptive line is identified by a 4-letter indentation.

This volume is divided into two sections. The first section or "preamble" is brief (9 pages) and has two parts:

The first part contains items which provide:

- (a) general guides to the classification of broad categories of goods
(e.g.: BERYLLIUM COPPER IS A COPPER ALLOY.)
- (b) definitions of common abbreviations used in this volume
(e.g.: FAB IS AN ABBREVIATION FOR FABRICS.)
- (c) warnings against basing a commodity classification decision on a term known to apply to more than one class of commodity
(e.g.: IGEPON IS A GENERAL TRADE NAME)

These items do not show a commodity code, and are arranged in alphabetic order.

The second part contains also in alphabetic order those group descriptions which are included in Volume III, the Alphabetic Index, in order to assist in locating groups (or sub-groups) of commodities often thought of as collective units or important in the structure of the classification. They show the group code, and may contain a unit of quantity (where all classes in the group have the same unit), or a dash (where no classes take a quantity), or a blank in the quantity column (where there is no common standard within the group). Leader dots link the description and its unit of quantity.

The balance of this volume presents the import class descriptions and specific commodity rulings arranged in numeric order, and by alphabetic order within each class. The first item shown for any class is the class description, while additional items for any class are specific commodity rulings. These items have the following characteristics:

1. Class descriptions: these consist of one descriptive line of up to 35 characters, a unit of quantity (or a blank if the class does not record quantity), and a class code. They do not have leader dots, and are further identified by the symbol □ preceding the description. In some cases class descriptions are sufficiently specific to make rulings on these classes unnecessary, but in other cases rulings are required to indicate the main commodities falling within given classes.
2. Specific commodity rulings: these consist of a 35 character description, occasionally supplemented by a second descriptive line of up to 31 characters, a unit of quantity (or a dash if goods which would be governed by a specific ruling are recorded without a quantity), and a class code. Leader dots link the ruling and its unit of quantity. The specific commodity rulings account for the vast majority of items in this volume.

Note that some rulings to certain classes specify a unit of quantity, while other rulings to the same classes show a dash in the quantity column. This will occur whenever a class takes both complete units and parts of units; rulings on complete units will usually specify a quantity (commonly "number"), while "parts" rulings will show a dash because parts are recorded without quantities.

This volume makes extensive use of abbreviations because of the need to limit most descriptions to 35 characters. Some are standard dictionary abbreviations, some are terms widely used in industry, and some have been tailored to the specific needs of this volume by such devices as the omission of vowels or the omission of terminal syllables. There is no complete list of the abbreviations used, more than one abbreviation may be used for the same word or phrase, and one abbreviation sometimes has two different meanings. The following examples define some of the more common abbreviations and illustrate the lack of uniformity:

(1) To describe steel:

AS ... alloy steel	CD ... cold drawn
CS ... carbon steel	CF ... cold finished
SS ... stainless steel (where distinguished from other alloy steel)	CR ... cold rolled
	HR ... hot rolled

(2) To describe textile fibres, textiles and textile products:

BL) ... bleached	M-M) ... man-made
COT ... cotton	MAN-MD) ...
FAB ... fabrics	WOV ... woven or broad woven
KNIT) ... knitted	WOV NAR ... narrow woven
KNTD) ...	

(3) Miscellaneous:

ELEC ... electric(al)	MAT ... materials
EXC ... except	PLAST ... plastic
INCL ... including	PROD ... products
IND ... industry	PT) ... parts
INDUST ... industrial	PTS) ... parts
MACH ... machine(s)	SYN ... synthetic
MACHY) ... machinery	T.I. ... tariff item
MCHY) ...	

Units of Quantity: In preparing the import commodity classification, a systematic effort was made to select units of quantity which could readily be reported, which could be made uniform in import and export statistics, and which would not conflict with units which must be shown on customs documents for tariff purposes. As far as possible uniform units of quantity are used in each group of the classification to facilitate mechanical methods of tabulation, and also for goods imported under any tariff item to facilitate reporting. Weight and number are the most commonly used units since one or both of these is normally available for any import shipment, but in some cases measures of volume, area or length are used to conform with prevailing industrial practice or the tariff. Generally, weight is the most common measure of quantity in Sections II, III and IV of the classification, number in Sections I and V.

Producers and processors of canned foods have recommended that quantity statistics for these commodities should be in terms of "net weight", i.e. that the weight of all containers, including the cans, should be omitted and only the weight of the contents of the cans shown. This classification attempts to follow that recommendation for canned meats, canned fish, canned dairy produce, canned pickles, canned maple products, canned instant coffee, canned soups and canned baby foods. It is not feasible to follow this practice for other canned foods, especially for canned fruits and vegetables, since the necessary information can not readily be extracted from customs documents.

Throughout the import commodity classification the term "canned" means preserved solely by being shut off from contact with air. It therefore includes all food preserved by hermetically sealed containers, whether these be made of metal, of glass or of other materials, and also food packed in plastic wrappings and preserved solely by sealing against penetration by air. It does not include frozen foods regardless of the use of hermetically sealed containers, since frozen foods are preserved primarily by being frozen rather than by being shut off from contact with air. Likewise foods wrapped and sealed in plastic materials but which must be kept under refrigeration are not included as "canned".

ABBREVIATIONS, DEFINITIONS AND UNITS OF QUANTITY USED IN CANADIAN IMPORT STATISTICS

Bbl.	Volume in barrels, for petroleum, 35 Canadian gallons or 42 U.S. gallons
Broad woven ...	More than 12 inches in width.
Canned	Preserved solely by being shut off from air.
Carat	Weight in carats.
Cord	Volume in cords.
Cwt.	Weight in hundredweights of 100 lb. each.
Cwt. N.	For canned foods, weight of contents of cans in hundredweights of 100 lb. each, the weight of all containers and packing being excluded.
Doz.	Number of dozens.
Doz. Pr.) Dz. Pr.)	Number of pairs in dozens.
Ft.	Length in linear feet.
Gal.	Volume in Canadian gallons (1 U.S. gal. = 0.83 Can. gal.).
Gross	Number in gross.
Hardwood	Wood from broad-leaved trees.
Kg.	Weight in kilograms (1 Kg. = 2.2 lb.).
Lb.	Weight in pounds.
Lb. N.	For canned foods, weight of contents of cans in pounds, the weight of all containers and packing being excluded.
M.	Number in thousands.
M. B. Ft.) M. B. F.)	Volume in thousand board feet.
M. Cu. Ft.) M. C. F.) ...	Volume in thousand cubic feet.
M. Kw. H.	Thousand kilowatt hours.

Narrow woven ...	Not more than 12 inches in width.
N. E. S.	Not elsewhere specified.
No.	Number.
Oz.	Weight in ounces.
Pack	Number of packs.
Pair	Number of pairs.
P. Gal.	Volume of alcoholic content in terms of Canadian gallons of the strength of proof (1 U.S. P.gal. = 0.74 Can. P.gal.).
Pkg.	Number of packages.
Softwood	Wood from coniferous trees.
Sq. Ft.	Area in square feet.
Sq. Ft. 1/4" equiv.)) SF1/4)	Volume in square feet of 1/4" thickness, other thicknesses to be converted to the equivalent of 1/4" thickness (e.g. 10,000 sq.ft. of 1/8" plywood = 5,000 sq.ft. of 1/4" equivalent).
Sq. Ft. 5/8" equiv.)) SF5/8)	Volume in square feet of 5/8" thickness, other thicknesses to be converted to the equivalent of 5/8" thickness (e.g. 10,000 sq.ft. of 1/2" particle board = 4,000 sq.ft. of 5/8" equivalent).
Sq. Yd.	Area in square yards.
Ton	Weight in short tons of 2,000 lb. each: 1 long ton = 1.12 short tons or 2,240 lb. 1 metric ton = 1.1 short tons or 2,205 lb.
Tr. Oz.	Weight in troy ounces.
-	In Unit of Quantity Column: no quantity recorded.
□	Precedes each class description card to distinguish class descriptions from rulings.

UNITS OF QUANTITY USED IN THE FRENCH CLASS DESCRIPTIONS

BRL	Volume en barils.
CARAT	Poids en carats.
CORDE	Volume en cordes.
DOUZ	Nombre de douzaines.
D PRE	Nombre de douzaines de paires.
GALL	Volume en gallons canadiens.
GAL P	Volume du contenu alcoolisé en gallons canadiens de preuve.
GR	Nombre de grosses.
KILO	Poids en kilomètres.
LIV	Poids en livres.
LIV N	Poids du contenu en livres (récipients exclus).
M	Nombre en milliers.
M KWH	Milliers de kilowatts-heure.
M PCU	Volume en milliers de pieds cubes.
M P P	Volume en milliers de pieds planche.
NOMB	Nombre.
ONCE	Poids en onces.
ON TR	Poids en onces troy.
PAQ	Nombre de paquets.
PAIRE	Nombre de paires.
PC1/4	Volume en pieds carrés de 1/4 de pouce d'épaisseur.
PC5/8	Volume en pieds carrés de 5/8 de pouce d'épaisseur.
PI	Longueur en pieds linéaires.
PI CA	Superficie en pieds carrés.

UNITS OF QUANTITY USED IN THE FRENCH CLASS DESCRIPTIONS (Concluded)

QTL	Nombre en quintal en poids de 100 livres.
QTL N	Poids du contenu en quintal de 100 livres (récipients exclus).
TONNE	Poids en tonnes courtes de 2,000 livres.
VG CA	Superficie en verges carrées.
